Inventor: ELIZAROV A N; KATELNITSKAYA L I; LUZHETSKAYA I V;

Accession/Update: 2000-050948 / 200004

IPC Code: A61B 10/00 ;

Derwent Classes: P31;

Derwent Abstract: (RU2115366C) Novelty - Method consists in determination of the degree of organism resistibility to hypoxia in the beginning, middle and end of the term of treatment according to the results of partial oxygen stress with the aid of the Hypoxicator apparatus, time during which the degree of hemoglobin saturation with oxygen is reduced after giving of hypoxic mixture with an oxygen content of 10% down to values when hypoxia has no its injurious effect (to 80%) and time of recovery of partial oxygen stress up to the initial one.  
Use - Medicine, applicable for estimation of efficiency of treatment of hypertensive disease, neurocirculatory dystonia, ischemia heart disease, bronchopulmonary pathology.  
Advantage - Increased time of reduction of partial oxygen stress and reduced time of its recovery to initial level. 7 dwg, 6 tbll
